

1. Unpack all components

Carefully remove all items from the packaging and ensure everything is included based on your order.
 Note: Contents may vary — some orders include fabric only, while others include a full kit (pole, ground spike, carry bag, elastic cord) or alternative bases such as a cross base.

2. Prepare your base

a. Ground Spike

Push the spike firmly into the ground, ensuring it is straight and secure.

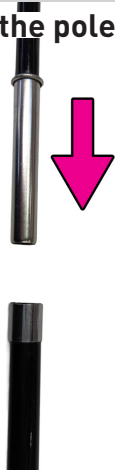

2. Prepare your base

b. Cross Base (or alternative base)

Assemble and position the base on a flat, stable surface.

3. Assemble the pole

Join the pole sections together by inserting each piece securely into the next until fully connected.

4. Insert the pole into the flag

Slide the assembled pole through the sleeve of the flag, ensuring it feeds through smoothly and evenly.

5. Secure and tension the flag

Attach the elastic cord to the plastic hook at the base of the flag.
 Adjust the cord if needed to create proper tension.
 Important: The flag should be firm but not overly tight — too loose may cause sagging, too tight may cause wrinkling.

6. Mount the flag to the base

a. Ground Spike

Insert the pole into the spike base.

6. Mount the flag to the base

b. Cross Base (or alternative base)

Insert and secure the pole into the base fitting.

7. Final check

Ensure the flag is straight, tensioned correctly, and the design is clearly visible.
 Step back and admire your setup.
